

Serving Your Dev Build

John Papa

@john_papa | www.johnpapa.net

Efficient at Development Time

Takes multiple steps to serve your code

Reduce to 1 step

Restart when server code changes

Must be fast

```
gulp inject  
node src/server/app.js
```

Serving Development Code

What we want:

- Prepare the styles and HTML
- Manually restart on node server changes

Efficient Gulp Task

```
gulp serve-dev
```

```
graph TD; A[Prepare code] --> B[Run the node server]; B --> C[Restart on node changes];
```

Prepare code

Run the node server

Restart on node changes

nodemon

Restart node server

Watch file changes

Handle events

gulp-nodemon

Adds support for running a task
on fire of the events

Restart node server

Watch file changes

Handle events

Recap

Simplify dev process
nodemon

Easier to start and code

Restart on node server changes
